### The SICON Outstanding Young Scientists Seminar

In the past 10 years, Syngenta Postgraduate Fellowship programme has sponsored 76 postgraduates students, of which 56 have been graduated from this programme. I am very pleased that many of them have established themselves in a short period of time and started their own independent researches.

Three of them have the positions of full professorship and many have the associate professor titles.

These young scientists are keen to keep the links with Syngenta and are willing to make contributions to support the Syngenta Postgraduate Fellowship.

In 2015, I decided to add The Outstanding Young Scientists Seminar series to the SICON series to provide them, but not limited to them a platform to report their achievements and success stories.

## The Syngenta Postgraduate Workshop

The Syngenta PhD programme has led to several substantial collaborations and many postgraduate projects. Compounds generated from these projects have been screened in Syngenta, and novel reagents have been provided for use in Syngenta projects. In addition, a large number of compounds have been brought into Syngenta for screening. Furthermore, 260 high quality papers have been published, often with Syngenta scientists as co-authors and with Syngenta acknowledged as a sponsor.

In total, 76 postgraduate students have now been sponsored through our Syngenta Fellowship Programme, and many of them are now starting their own independent academic careers in China. They are keen to remain in contact with Syngenta and continue to provide compounds for screening and attend the Syngenta International Conferences.

The annual Syngenta Student Workshop has been an unique platform for the students to present their academic research results and discuss the topics relevant to crop protection. With Syngenta's help and input, very high standard of scientific discoveries have been achieved and published in high ranking academic journals. The results of these PhD projects have and will continue to benefit the crop protection community.
